Exp 6 Demonstrate session tracking using HttpSession

AIM:

To implement a simple login system using **HttpSession** to track user sessions in a Java Servlet.

ALGORITHM:

- Step 1: Create an HTML Login Form to take username & password as input.
- Step 2: Develop a Servlet (LoginServlet.java) to handle login requests.
- Step 3: Validate the user credentials and start an HttpSession.
- **Step 4:** Redirect users to the **DashboardServlet**, where session details are displayed.
- **Step 5:** Provide a **LogoutServlet** to end the session.
- **Step 6:** Run the server and test session tracking.

PROGRAM:

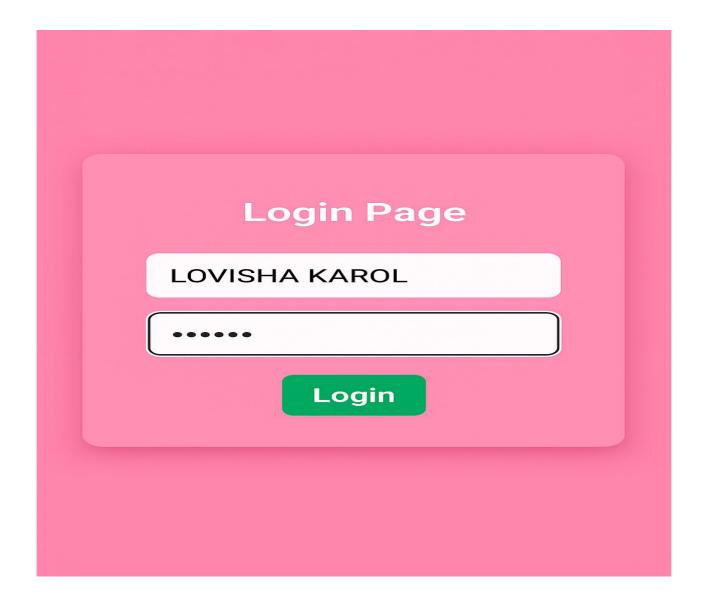

```
index.html (Login Page)
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
                                                                          <title>Login
Page</title>
  <link rel="stylesheet" href="styles.css"> </head>
<body>
  <div class="container">
    <h2>Login System with Session Tracking</h2>
    <form action="LoginServlet" method="POST">
       <input type="text" name="username" placeholder="Enter Username" required>
       <input type="password" name="password" placeholder="Enter Password" required>
       <button type="submit">Login</button>
    </form>
  </div>
</body>
</html>
```

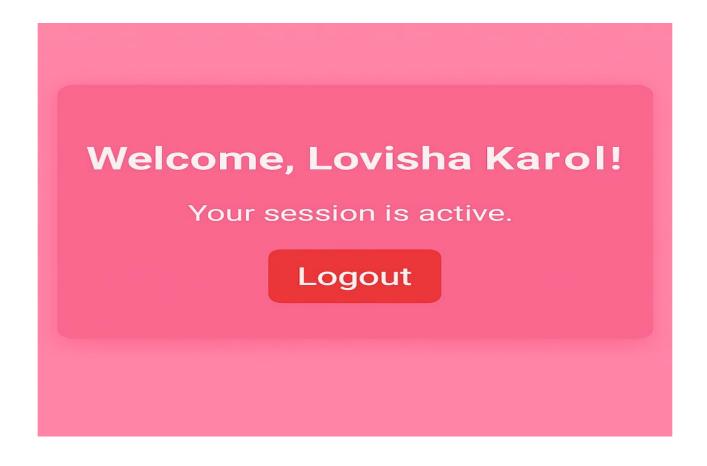

```
styles.css
            body { font-family: 'Poppins',
sans-serif:
               background: linear-gradient(to
right, #fbc2eb,
#a6c1ee);
             text-align: center;
                                 display:
       justify-content: center;
flex;
                                align-
items: center:
                height: 100vh;
                                 margin:
0; } .container {
